BGB707L7ESD

General purpose LNA MMIC with integrated ESD protection and active biasing

🛒 Order now   📥 Technical documents   🛠 Simulation   👥 Support

Product description

The BGB707L7ESD is a high performance low noise amplifier (LNA) MMIC based on Infineon's silicon germanium carbon (SiGe:C) bipolar technology.

Feature list

- Minimum noise figure NF_{min} = 0.6 dB at 2.4 GHz, 3 V, 3 mA
- Supply voltage V_{CC} = 1.8 V to 4.0 V at T_A = 25 °C
- Integrated ESD protection: 2 kV HBM at all pins

Product validation

Qualified for industrial applications according to the relevant tests of JEDEC47/20/22.

Potential applications

- Satellite navigation systems (e.g. GPS, GLONASS, BeiDou, Galileo)
- Wireless communications: WLAN 2.4 GHz and 5-6 GHz bands, broadband LTE or WiMAX LNA
- ISM applications like RKE and smart meter, as well as for emerging wireless applications such as DVB-Terrestrial

Device information

Table 1   **Part information**

Product name / Ordering code	Package	Pin configuration				Marking	Pieces / Reel
BGB707L7ESD / BGB707L7ESDE6327XTSA1	TSLP-7-1	1 = V_{CC}	2 = V_{Bias}	3 = RF_{in}	4 = RF_{out}	AZ	7500
		5 = V_{Ctrl}	6 = Current adjust	7 = Ground			

Attention: **ESD (Electrostatic discharge) sensitive device, observe handling precautions**

Functional block diagram

This functional block diagram explains how the BGB707L7ESD is used. The RF power on/off function is controlled by applying V_{Ctrl}. By using an external resistor R_{ext}, the pre-set current of 2.1 mA (when R_{ext} is omitted) can be increased. Base V_B and collector V_C voltages are applied to the respective pins RF_{in} and RF_{out} by external inductors L_B and L_C.

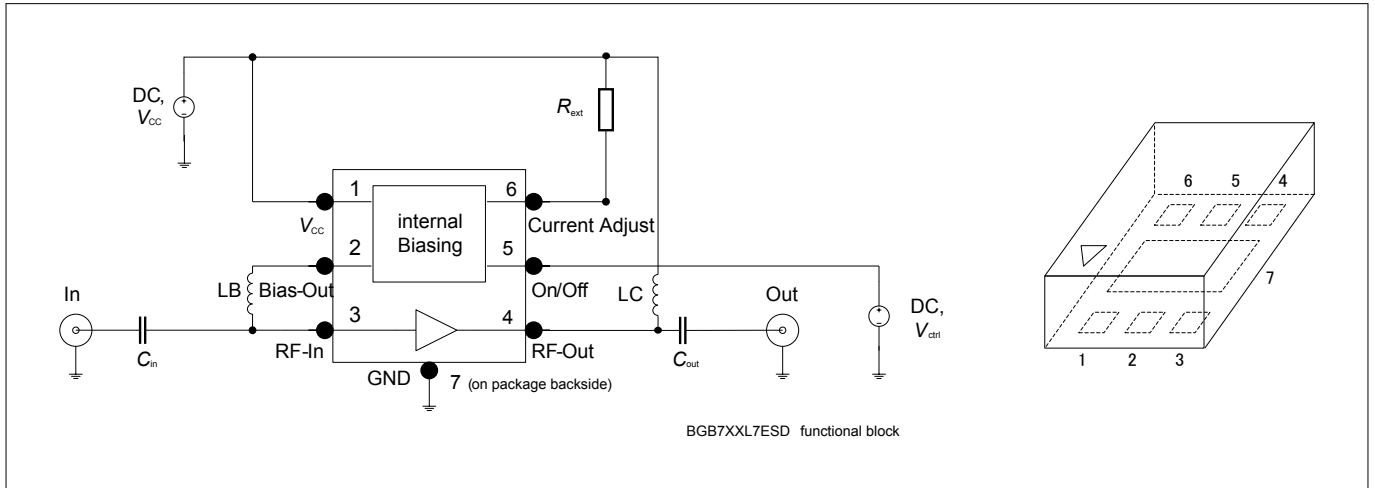

Figure 1   **Functional block diagram**

Table of contents

1 Operating conditions

Table 2 Operation conditions at T_A = 25 °C

Parameter	Symbol	Values			Unit	Note or test condition
		Min.	**Typ.**	**Max.**		
Supply voltage	V_{CC}	1.8	3	4	V	–
Control voltage in on-mode	$V_{Ctrl\text{-}on}$	1.2	–	V_{CC}		
Control voltage in off-mode	$V_{Ctrl\text{-}off}$	-0.3		0.3		

2 Absolute maximum ratings

Table 3 Absolute maximum ratings at T_A = 25 °C (unless otherwise specified)

Parameter	Symbol	Values		Unit	Note or test condition
		Min.	**Max.**		
Supply voltage	V_{CC}	–	4	V	T_A = 25 °C
			3.5		T_A = -55 °C
Supply current	I_{CC}		25	mA	–
DC current at RF_{in}	I_B		2		
Control voltage	V_{Ctrl}		4	V	
Total power dissipation[1]	P_{tot}		100	mW	$T_S \leq 112$ °C
Junction temperature	T_J		150	°C	–
Storage temperature	T_{Stg}	-55			

Attention: **Stresses above the max. values listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Exceeding only one of these values may cause irreversible damage to the integrated circuit.**

---

[1] T_S is the soldering point temperature. T_S is measured on the emitter lead at the soldering point of the PCB.

3 Thermal characteristics

Table 4 **Thermal resistance**

Parameter	Symbol	Values			Unit	Note or test condition
		Min.	Typ.	Max.		
Junction - soldering point	R_{thJS}	–	375	–	K/W	–
Figure 2 **Total power dissipation P_{tot} = f(T_S)**

4 Electrical characteristics

4.1 DC characteristics

Table 5 DC characteristics at V_{CC} = 3 V, T_A = 25 °C

Parameter	Symbol	Values			Unit	Note or test condition
		Min.	Typ.	Max.		
Supply current in on-mode	$I_{CC\text{-}on}$	1.6	2.1	2.6	mA	V_{Ctrl} = 3 V
		–	3	–		R_{ext} = open
		–	4.2	–		R_{ext} = 12 kΩ
		–	6	–		R_{ext} = 4.7 kΩ
		–	10	–		R_{ext} = 2.4 kΩ
						R_{ext} = 1 kΩ
Supply current in off-mode	$I_{CC\text{-}off}$	–	–	6	µA	V_{Ctrl} = 0 V
Control current in on-mode	$I_{Ctrl\text{-}on}$		14	20		V_{Ctrl} = 3 V
Control current in off-mode	$I_{Ctrl\text{-}off}$		–	0.1		V_{Ctrl} = 0 V

4.2 Characteristic DC diagrams

The measurement setup is an application circuit according to Figure 1 on page 2, using the integrated biasing. T_A = 25 °C (unless otherwise specified).

**Figure 3**   Supply current vs external resistance I_{CC} = f(R_{ext}), V_{CC} / V_{Ctrl} = parameter

Figure 4   Supply current vs supply voltage I_{CC} = f(V_{CC}), V_{Ctrl} = 3 V, R_{ext} = parameter
Figure 5   Supply current vs control voltage $I_{CC} = f(V_{Ctrl})$, $V_{CC} = 3$ V, R_{ext} = parameter

**Figure 6**   Supply current vs temperature $I_{CC} = f(T_A)$, $V_{Ctrl} = V_{CC} = 3$ V, R_{ext} = open

4.3 AC characteristics

AC characteristics are described for higher frequencies in a 50 Ω environment.

4.3.1 AC characteristics in test fixture

Measurement setup is a test fixture with Bias-T's in a 50 Ω system according to Figure 7, for frequencies f from 150 MHz to 10 GHz at $V_C = 3$ V, $T_A = 25$ °C. The collector current I_C is controlled by the external base voltage V_B. Which is not dependent of the biasing reference voltage V_{Bias}. The bias voltage V_C at the output RF_{out} allows direct measurement of the amplifier performance, as a function of bias conditions without passive components.

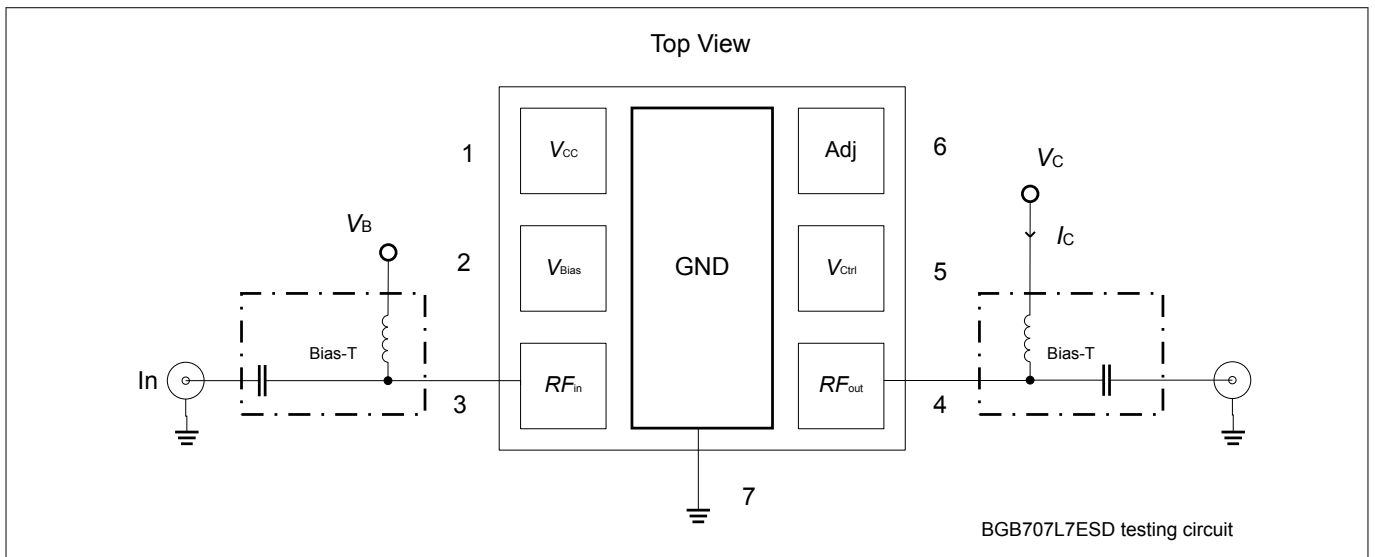

Figure 7   **Testing circuit for frequencies f from 150 MHz to 10 GHz**

Table 6   AC characteristics, V_C = 3 V, f = 150 MHz

Parameter	Symbol	Values			Unit	Note or test conditions
		Min.	Typ.	Max.		
Minimum noise figure	NF_{min}	–	0.4	–	dB	I_C = 2.1 mA
			0.4			I_C = 3 mA
			0.5			I_C = 6 mA
			0.55			I_C = 10 mA
Transducer gain	$\|S_{21}\|^2$		17			I_C = 2.1 mA
			19			I_C = 3 mA
			24			I_C = 6 mA
			27			I_C = 10 mA
Maximum power gain	G_{ms}		31.5			I_C = 2.1 mA
			33			I_C = 3 mA
			35			I_C = 6 mA
			37			I_C = 10 mA
Output 1 dB gain compression point [2]	OP_{1dB}		3.5		dBm	I_{Cq} = 2.1 mA, I_{Ccomp} = 11 mA [3]
			4			I_{Cq} = 3 mA, I_{Ccomp} = 11 mA
			4.5			I_{Cq} = 6 mA, I_{Ccomp} = 11 mA
			3			I_{Cq} = 10 mA, I_{Ccomp} = 11 mA
Output 3rd order intercept point	OIP_3		2			I_C = 2.1 mA
			6			I_C = 3 mA
			14.5			I_C = 6 mA
			19.5			I_C = 10 mA

[2] OP_{1dB} is the output compression point achieved in a 50 Ω application circuit according to Figure 1 using the integrated biasing.

[3] I_{Cq} is the quiescent current at small input power levels. I_{Cq} increases up to I_{Ccomp} as RF input power approaches IP_{1dB}, cf. Figure 14.

Table 7   AC characteristics, V_C = 3 V, f = 450 MHz

Parameter	Symbol	Values			Unit	Note or test conditions
		Min.	**Typ.**	**Max.**		
Minimum noise figure	NF_{min}	–	0.45	–	dB	I_C = 2.1 mA
			0.45			I_C = 3 mA
			0.5			I_C = 6 mA
			0.6			I_C = 10 mA
Transducer gain	$\lvert S_{21}\rvert^2$		17			I_C = 2.1 mA
			19			I_C = 3 mA
			24			I_C = 6 mA
			27			I_C = 10 mA
Maximum power gain	G_{ms}		27			I_C = 2.1 mA
			28			I_C = 3 mA
			30.5			I_C = 6 mA
			32			I_C = 10 mA
Output 1 dB gain compression point [2]	OP_{1dB}		11.5		dBm	I_{Cq} = 2.1 mA, I_{Ccomp} = 11 mA [3]
			12			I_{Cq} = 3 mA, I_{Ccomp} = 14 mA
			11.5			I_{Cq} = 6 mA, I_{Ccomp} = 16 mA
			9.5			I_{Cq} = 10 mA, I_{Ccomp} = 15 mA
Output 3rd order intercept point	OIP_3		2			I_C = 2.1 mA
			5.5			I_C = 3 mA
			14			I_C = 6 mA
			19.5			I_C = 10 mA

---

[2] OP_{1dB} is the output compression point achieved in a 50 Ω application circuit according to Figure 1 using the integrated biasing.

[3] I_{Cq} is the quiescent current at small input power levels. I_{Cq} increases up to I_{Ccomp} as RF input power approaches IP_{1dB}, cf. Figure 14.

Table 8   AC characteristics, V_C = 3 V, f = 900 MHz

Parameter	Symbol	Values			Unit	Note or test conditions
		Min.	**Typ.**	**Max.**		
Minimum noise figure	NF_{min}	–	0.55	–	dB	I_C = 2.1 mA
			0.55			I_C = 3 mA
