

Octal channel high-side driver

PowerSO-36

Features

- $V_{CC}/2$ compatible input
- Junction overtemperature protection
- Case overtemperature protection for thermal independence of the channels
- Current limitation
- Short-circuit load protection
- Undervoltage shutdown
- Protection against loss of ground
- Very low standby current
- Compliance to 61000-4-4 IEC test up to 4 kV

Description

The VN808-E and VN808-32-E are monolithic devices, realized in STMicroelectronics VIPower M0-3 technology, intended to drive any kind of load with one side connected to ground. Active current limitation combined with thermal shutdown and automatic restart, protect the device against overload. In overload conditions, the channel turns OFF and ON again automatically in order to maintain the junction temperature between T_{JSD} and T_R . If this condition causes case temperature reach T_{CSD} , overloaded channels are turned OFF and restart only when case temperature decreases down to T_{CR} . Non-overloaded channels continue to operate normally. The device automatically turns OFF in case of ground pin disconnection. This device is especially suitable for industrial applications conform to IEC 61131.

1 Maximum ratings

Table 1. Absolute maximum ratings

Symbol	Parameter	Max.	Unit
V _{CC}	DC Supply Voltage	45	V
-I _{GND}	DC Ground Reverse Current	250	mA
	TRAN ground reverse current (pulse duration < 1 ms)	6	A
I _{OUT}	DC Output Current	Internally limited	A
-I _{OUT}	Reverse DC Output Current	2	A
I _{IN}	DC Input Current	±10	mA
V _{IN}	Input Voltage Range	-3/+V _{CC}	V
V _{ESD}	Electrostatic discharge (R = 1.5K Ω; C = 100pF)	2000	V
P _{TOT}	Power dissipation at T _c = 25°C	96	W
EAS	Single pulse Avalanche Energy per channel, all channels driven simultaneously (T _{amb} = 125 °C, I _{OUT} = 0.6 A per channel)	1.15	J
T _J	Junction Operating Temperature	Internally limited	°C
T _c	Case Operating Temperature	Internally limited	°C
T _{STG}	Storage Temperature	-40 to 150	°C

Table 2. Thermal data

Symbol	Parameter	Max. Value	Unit
R _{th(JC)}	Thermal Resistance, Junction-to-case	1.3	°C/W
R _{th(JA)}	Thermal Resistance, Junction-to-ambient ⁽¹⁾	50	

1. When mounted on FR4 printed circuit board with 0.5 cm² of copper area (at least 35 μm thick) connected to all TAB pins.

2 Electrical characteristics

10.5 V < V_{CC} < 32 V; - 40 °C < T_J < 125 °C; unless otherwise specified.

Table 3. Power Section

Symbol	Parameter	Test Condition	Min.	Typ.	Max.	Unit
V _{CC}	Operating supply voltage		10.5		45	V
V _{USD}	V _{CC} under-voltage turn-off threshold		7		10.5	V
R _{ON}	On-state resistance	I _{OUT} = 0.5A; T _J = 25°C I _{OUT} = 0.5A; T _J = 125°C		150	185 280	mΩ
I _S	Supply current	OFF-state V _{CC} = 24 V; T _{CASE} = 25 °C ON-state (all channels ON) V _{CC} = 24 V; T _{CASE} = 100 °C			150 12	μA mA
I _{LGND}	Output current at turn-off	V _{CC} = V _{STAT} = V _{IN} = V _{GND} = 24 V; V _{OUT} = 0 V			1	mA
I _{L(OFF)}	OFF-state output current	V _{IN} = V _{OUT} = 0 V	0		5	μA
V _{OUT(OFF)}	OFF-state output voltage	V _{IN} = 0 V; I _{OUT} = 0 A			3	V
t _{d(VCCON)}	Power-on delay time from VCC rising edge	See Figure 7		1		ms

Table 4. Switching (V_{CC} = 24V)

Symbol	Parameter	Test Condition	Min.	Typ.	Max.	Unit

Figure 7. V_{CC} turn-ON

6 Power Section

6.1 Current limitation

Current limitation process is activated when the current sense connected on output stage measures a current value higher than a fixed threshold.

When this condition is verified, the gate voltage is modulated to prevent the output current from rising above to the limitation value.

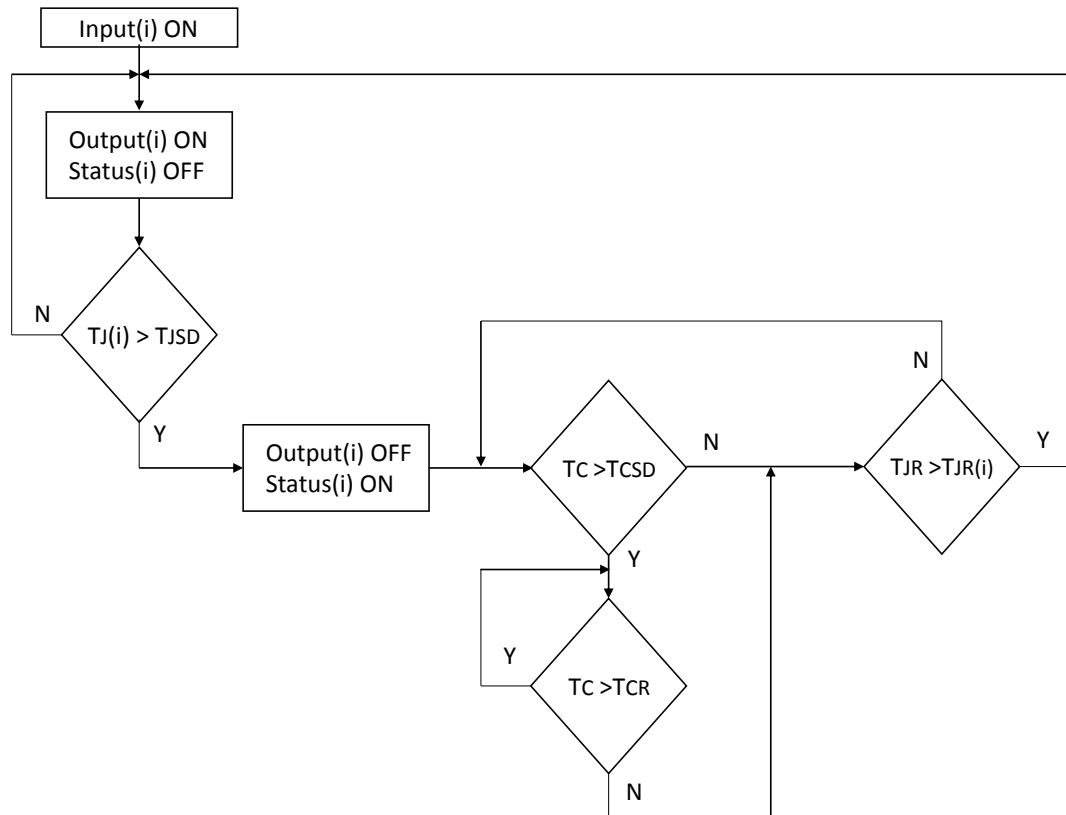

6.2 Thermal protection

The device is protected against overheating due to overload conditions. During driving period, if the output is overloaded, the device suffers two different thermal stresses, the first one related to the junction, and the second related to the case.

The two faults have different trigger thresholds: the junction protection threshold (T_{JSD}) is higher than the case protection one (T_{CSD}); generally the first protection that is activated in thermal stress conditions is the junction thermal shut-down. The output is turned-off when the temperature is higher than the related threshold and turned back on when it goes below the reset threshold (T_{JR}). This behavior continues until the fault on the output is present.

If the thermal protection is active and the temperature of the package increases over the fixed case protection threshold, the case protection will be activated and the output is switched-off and back on when the junction temperature, of each channel in fault and case temperature, are below the respective reset thresholds.

Figure 14. Thermal protection flowchart

6.3 Status indication

The Status pin is an active high common open source output indicating fault conditions. This pin is activated in case of junction over-temperature ($T_{JX} > T_{JSD}$) of one or more output channels. Figure 15 and Figure 16 show the Status behavior when T_{JSD} is triggered before T_{CSD} and when T_{CSD} is triggered before T_{JSD} respectively.

Figure 15. Thermal Protection and STATUS Behavior (T_{JSD} triggered before T_{CSD})

Figure 16. Thermal Protection and STATUS Behavior (T_{CSD} triggered before T_{JSD})

7 Reverse polarity protection

Reverse polarity protection can be implemented on board using two different solutions:1.

1. Placing a resistor (R_{GND}) between IC GND pin and load GND
2. Placing a diode between IC GND pin and load GND

If option 1 is selected, the minimum resistance value has to be selected according to the following equation:

$$R_{GND} \geq V_{CC}/I_{GND}$$

where I_{GND} is the DC reverse ground pin current and can be found in [Section 1 Maximum ratings](#) of this datasheet.

Power dissipated by R_{GND} (when V_{CC} < 0: during reverse polarity situations) is:

$$P_D = (V_{CC})^2/R_{GND}$$

If option 2 is selected, the diode has to be chosen by taking into account VRRM > |V_{cc}| and its power dissipation capability:

$$P_D \geq I_S * V_f$$

Note: In normal operation (no reverse polarity), there is a voltage drop (ΔV) between GND of the device and GND of the system. Using option 1, ΔV = R_{GND} * I_{cc}. Using option 2, ΔV = V_{F@}(I_F).

Figure 17. V_{CC} Reverse Polarity Protection

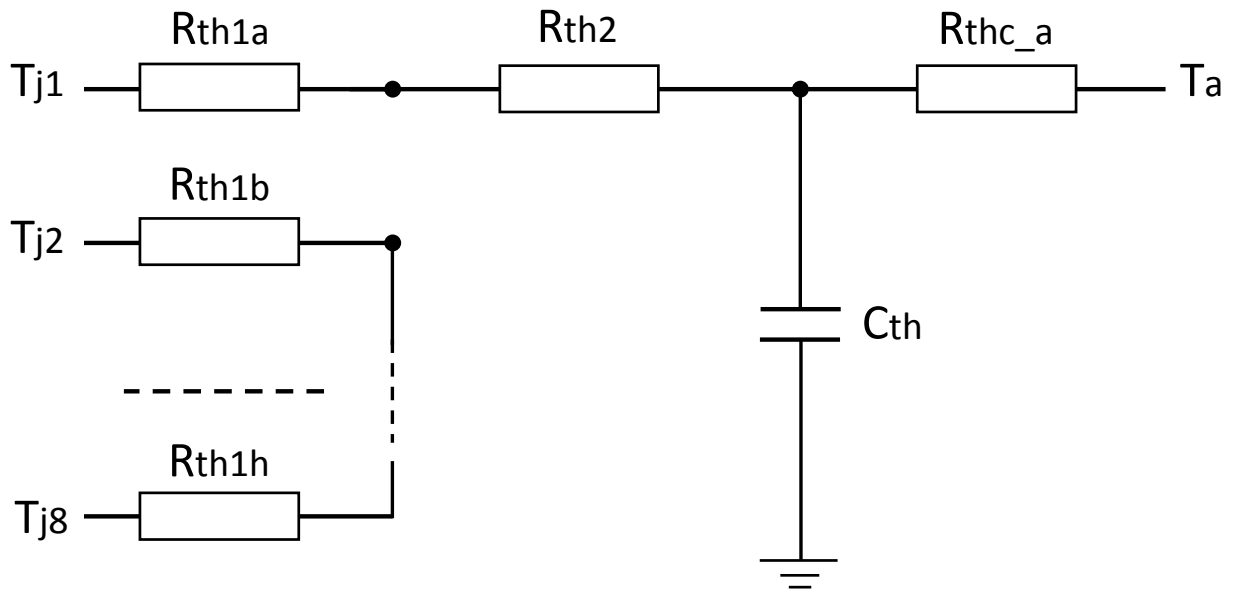

This schematic can be used with any type of load.
