Process Change Notification PCN 08-2015

**Test Location Move and Test Platform Transfer for
TSL25715FN, TSL25721FN, TCS37715FN, TCS37717FN, TCS34725FN**

Dear Customer,

ams has to move the final test from our current subcontracted test facility OKINS in Korea to a new subcontracted test facility HANA LPN in Thailand. This is due to an end of life notification from OKINS. The facility change will also require a test platform transfer for affected product.

Products affected:

TSL25715FN

TSL25721FN

TCS37715FN

TCS37717FN

TCS34725FN

Reason for change: OKINS notified ams about test plant shutdown by end of September 2015.

Timing of change: Completion by Dec 31, 2015

Description of affected production steps:

Current product flow is assembly in HANA, then 100% final test at our subcontractor OKINS in Korea on FST platform. Final test verifies the datasheet parameters, and device functionality.

Key points for Transfer:

- Test platform change from FST to Maverick
- Test facility change from OKINS-Korea to HANA LPN-Thailand
- Correlation complete: December 31, 2015

Transfer Acceptance:

Verification of product will include material to be tested before and after the move as described in our internal spec QTY459 Test Program Release. Correlation results will be available upon request after completion.
