

CM1205

ESD Protection Diode Array

Chip Scale Package, 8-Channel

Description

The CM1205 surge protection array provides a very high level of protection for sensitive electronic components that may be subjected to ESD.

The CM1205 will safely dissipate ESD strikes at levels well beyond the maximum requirements set forth in the IEC 61000-4-2 international standard (Level 4, ± 8 kV contact discharge). All I/Os are rated at ± 25 kV using the IEC 61000-4-2 contact discharge method. Using the MIL-STD-883D (Method 3015) specification for Human Body Model (HBM) ESD, all pins are protected for contact discharges to greater than ± 30 kV.

The Chip Scale Package format of this device enables extremely small footprints that are necessary in portable electronics such as cellular phones, PDAs, internet appliances and PCs. The large solder bumps allow for standard attachment to laminate boards without the use of underfill.

The CM1205 features *OptiGuard*[™] coating for improved reliability at assembly and is available with RoHS compliant lead-free finishing.
